Your solution for occupational health management (OHM)

developed for
OHM managers

key figure-based &
interactive

digital &
process orientated

visual &
proactive

standardised &
customisable

saneware

Our software supports you in all important processes

Dashboard with all relevant key figures
Keep an eye on the most important key figures in real time at all times. Absences are imported daily and displayed in a visually appealing way according to desired characteristics such as gender, cost centre or location. KPIs can be filtered live and exported.

Organising the operational integration management (BEM) process digitally and efficiently
We guide you securely and digitally through the BEM process. BEM cases are recognised automatically, letters can be generated digitally and then sent. You can coordinate appointments and measures directly in the software.

Conduct surveys anonymously in the company
Low-threshold pulse surveys as well as complex surveys can be carried out intuitively. Employees can take part on the move (via a QR code) or on their PC. Survey sets can be easily imported and are dynamically customisable.

Create and manage measures
Workplace health promotion measures can be created and managed in the software. Participant lists, cost management and measuring the success of the measures are all done digitally.

Digital reporting
All relevant data is already available and does not have to be merged in a time-consuming process. Simply select the data required for your report and export it to your report as a graphic or raw data.

Always up to date with the newsfeed
High-quality content on the topic of OHM, enriched with partners whose products may be highly relevant for you.

Basic modules - Digital & efficient health management

BEM software

The Saneware „BEM software" supports the processes and logging obligations of operational integration management (**BEM** for short) in accordance with german law.

Reduce your workload with automatic identification, generated cover letters, action & task planning and many other functions. Benefit from audit compliance and a digital BEM file.

OHM dashboard

The the OHM dashboard displays up-to-date graphics about the employee health of your company. In addition to health rate, absenteeism, duration of illnesses, and age structures, you will receive many other KPIs broken down individually by location, client or cost center.

Additional modules

Printing service

With the optional „Printing Service" module, BEM case documents can be sent by post through an external service provider. The data protection compliant and time-saving solution relieves the BEM staff and optimizes the process flow.

Executives OHM Dashboard

Our executive dashboard provides them with an insight into the health rates of their area of responsibility in a data-protection-compliant manner. In addition to meaningful key figures and graphics, a company comparison is displayed.

The principles of our software architecture

Your data in safe hands
You entrust us with your health data. We are aware of our responsibility and work closely and frequently with our IT partners exclusively in Germany in accordance with the highest security standards.

Secure BGM-specific roles and rights concept
Saneware BGM utilises a roles and rights concept tailored to the users and their specific requirements. This enables our customers to put the software into operation quickly and securely..

High flexibility
Many of the software's standards can be customised as required. If you would like to use your own correspondence in the BEM module or if individual reporting needs to be fulfilled, this can be customised for specific clients in the admin area.

Modern ergonomics
Our users are guided via a dashboard and digital assistants. Current tasks are always clearly visible and easy to process at a glance.

Powerful reporting
Our key performance indicator system always provides you with a transparent overview of the status of your occupational health management in real time. Recognise the need for action at an early stage and review the resources deployed.

saneware

Who we are

Founded in 2019 as a joint venture of the companies Akubu UG and greenHR GmbH. This combines expertise in the development of modern software and secure specialist knowledge from the HR sector to form an agile young company with a clear focus.

Our home is in Osnabrück / Lower Saxony. Here we feel storm-proof and earthy. Hanseatic honesty and commitment. In Paderborn we feel the tradition and spirit of a renowned IT location as well as a lot of fresh and young wind.

Our goal is to develop the best integrated software for occupational health management on the German market. Uncompromising and technically state-of-the-art. Our customers are passionate about health, and we want to provide them with a universal tool with which they can work confidently and efficiently every day.

Our information security for you

The processing of health data places particularly high demands on information security. We are aware of this responsibility. We work exclusively with data centres in Germany and our customers' data is located exclusively in Germany.

Information security management system: TISAX® certification

Saneware Software GmbH successfully completed TISAX® certification in October 2023.

TISAX® „Trusted Information Security Assessment Exchange" is an international information security standard of the automotive industry and is based on the catalogue of the industry standard ISO/IEC 27001.

The results of the certification can be accessed via the TISAX® portal: https://portal.enx.com/

✓ Scope ID: SYZ64C
✓ Assessment ID: AXWTF7-3

Data security

The aim of data security is to ensure the confidentiality, integrity and availability of data. Confidentiality means that data can only be accessed by authorised persons. Integrity, which stands for the integrity of data against manipulation as well as technical defects, is also important for data security. Finally, availability means that existing data can also be used if necessary. We guarantee you data security through the consistent implementation of the General Data Protection Regulation (GDPR).

Data protection

Rights and obligations regarding the collection, processing and storage of personal data in general and health data in particular are governed by the General Data Protection Regulation. Naturally, guaranteed compliance with this set of rules is particularly important to us. Right from the programming stage, we have data protection officers on the development team to ensure unrestricted data protection right from the initial coding stage („protection by design"). A standardised rights and roles concept also enables our customers to guarantee complete data protection for internal users („protection by default").

Information security of the data centre:

Location:	Germany, Classification: Tier 3
Operator certification:	ISO/IEC 27001:2015, IDW PS951, ISAE 3402, ISO 9001, PCI:DSS
Security:	Video surveillance, access control, 24/7 staff on site
	Optical/thermal fire detectors on two levels
